

Features

- Twelve drawers
- Easy-glide rollers on drawers
- Heavy duty locks on drawers and doors for security
- Two covered 8" deep storage wells, 1/4" thick cover
- Choice of lead thickness (1/4", 1/2" or 1")
- Sleek stainless steel work area with a 4" backsplash and a 1/2" spill restricting lip
- Soft white, textured polyurethane enamel finish (other optional colors available)

12 Drawer Double Well Unit

An exceptionally easy to use system for organizing and handling radioisotopes, the 12 Drawer Double Wall Unit will allow the user to sort materials into a variety of categories while providing an efficient work area. Particularly well suited for brachytherapy, the double well system provides separate space to store sharps, gloves or other "hot" items.

Each drawer comes with easy-glide rollers for ease of operation and a choice of lead thicknesses. The work surface is stainless steel with a 4" backsplash and 1/2" lip to help contain any spills.

Purchased in conjunction with other units it can be built with a single, seamless work surface to achieve a clean, professional appearance.

Specifications

- Overall: 40"H x 30 1/4"W x 24 3/4"D (101.6 x 77.5 x 62.9 cm)

Four Drawer Work Station

The Four Drawer Work Station is one of Capintec's most versatile designs. The module has 4 drawers with easy-glide rollers for nearly effortless operation and enough space to hold a variety of items, radioactive or not. The large cabinet has 2 adjustable shelves each with a capacity of 100 lbs. to hold radioactive materials or waste for decay. In addition, the stainless steel work surface provides a wide-open space with a 4" backsplash and a 1/2" spill restricting lip.

When purchased with other modules a solid, seamless work surface can be included to produce a clean, professional appearance.
