

# Syringe Holders

## CII Syringe Carriers

### CII Transporter Shielded Syringe Carrier

The Capintec syringe and vial TRANSPORTER is designed to minimize cost and maximize function. The handle is attached to the body of the carrier which permits the lid to be easily lifted for syringe removal. The inside floor of the TRANSPORTER contains an insert designed to keep syringes separated and held in place. The large interior accommodates shielded 10 cc syringes as well as unshielded 20 cc vials. The TRANSPORTER is shielded all around with 1/8" lead and measures 7"x3" wide x 3"high.

### Shielded Syringe Carrier

This portable syringe carrier provides a convenient, safe way of storing and transporting syringes or vials containing radionuclides. Its large handle and light weight make it easy to carry. It has 1/8" lead shielding all around with inside dimensions of 5" long x 2" square.

### Rotund Container With Handle

Some activities call for greater shielding than is usually available in the department. The Rotund Lead container is designed with full 1" thick shielding and is provided with an easy carry handle attached. This shield will hold vials up to a 30 cc vial and can even be used in PET for quick transport of product when portability is required.

### CII Transporter II For PET

The Capintec PET Transporter II is designed for low cost and maximum function. The handle is attached to the body of the carrier allowing the lid to be lifted easily for syringe removal. The Transporter II contains .125" lead on the top, bottom, front and back; it has an additional .5" lead on each end. This increases the shielding during transport for a 511 Syringe Shield with syringe.

ITEM #	DESCRIPTION
0670-0007	CII Transporter
0670-0318	Shielded Syringe Carrier
0670-0010	Rotund Container with Handle
